AL MITTENTE CHE ... LA RELATIVA

Your Question

Given that sports garments are usually worn for a few hours during weekends, is it correct that the best technical solutions were developed for those garments, while for labour clothing the same skills of many years ago still apply, though people wear them everyday?

Our Answer

Certainly not! This is why Flower Gloves® developed an innovative clothing collection which offers all the technology created for sports garments.

1. Preformed cuts: it is not necessary to wear “sacks” to feel comfortable. On the contrary what we need is to carry out an accurate study of movements you make during your work and preform garments so as to allow those movements the maximum comfort.

2. Ergonomy: the quality relationship between user and garment is given by ergonom levels. The most important requirements to set these levels are:

- safety
- conformability
- functionality
- comfort
- well-being
- comprehension

Preformed cuts, new materials and technical solutions-such as waterproof zip-fasteners-allow us to reach this objective.

3. Integrability: another key element is the possibility of wearing various garments and still move comfortably. Each garment was developed to be perfectly integrated together with others.

4. Aesthetics: it is not less important than other factors-for the well-being as well as the image of people wearing these Flower Gloves® garments-resistance and lifetime included.

Thanks to this new certified and leading edge collection, labour clothing is now a tool designed and manufactured according to the real needs of working people.

HOOK • Cod. 003088 487

S-XXXL

High visibility long jacket in waterproof and breathable RAINFORT LIGHT, with bodice and detachable sleeves. Inside mesh lining. Preformed fitted sleeves - slightly tapered at the bottom - with sleeve bottom adjustment device provided by a velcro loop fastening. The back side is longer for a better lumbar protection.
